THE ANIME BASKET

CAPSTONE PROJECT BY: RODA SAMORTIN

INDEX

- Product Concept

- Desired Target Users / Market

- Planning

- Front End

- BackEnd

- Walkthrough

- Future Implementations

ANIME INDUSTRY

- It generated $21.5 Billion USD for Japan as of Dec. 2023

- 3rd largest industry in Japan

- Foreign immigration kept on rising

- Source: https://www.spielanime.com/anime/anime-effect-on-japans-economy-investigating-the-unprecedented-rise/

THE ANIME' BASKET

- Tired of navigating a minefield of spoilers for your current anime obsessions?

- Picture this: a lively, spoiler-proof sanctuary where you and your buddies can plunge into deep discussions, share your thrills, and connect over fresh episodes—all in a spoiler-free zone of bliss.

- **And, you're in control**! Share your anime passions exclusively with your inner circle, keeping spoil-mongers at bay. Welcome to your new spoiler-safe anime paradise! This is what my project is, The Anime Basket!

PRODUCT NAME

- Imagine you're picking a fruit and you put it on your basket

- You liked what you picked, and you're in control what you put in it.

CORE PRINCIPLE

- **Community and Connection**
- **Safe Spaces for Discussion**
- **Customizable Viewing Experience**
- **User-Friendly Interface and Customization**
- **Accessibility Anywhere**
- **Security (Further study)**

STAKEHOLDERS

- 1. **Users**: The primary stakeholders are the users of the anime list app. They include anime enthusiasts, casual viewers, and anyone interested in discovering and discussing anime.

- 2. **Developers**: The developers are responsible for creating and maintaining the app. They play a crucial role in ensuring the app's functionality, usability, and security.

- 3. **Content Providers**: SPOILER CHECKERS !! Content providers supply the app with information about various anime series, including synopses, reviews, and episode lists.

PLANNING (DRAFT) FRONT END

PLANNING

- **Step 1**

- **User Story -> Frustration with spoilers and non-customisable UI of the current AnimeList**

- Define **3 pain points.** Then, apply features for each point before resolving another problem.

  - *Rationale:* - Avoid getting trapped in the rabbit hole of desired features

    - Securing the quality, scalability and maintenance of each feature before adding new ones.

  1 pain point : **1** feature : **1** corresponding design

TOP 3 PAIN POINTS

a. Spoilers   ->   spoiler tag in comments

b. Limited sharing with Friends   -> Privacy/ Friend requests (Keep spoil-mongers away)

c. Customised Anime List   -> Minimalist design (AnimeList websites have

   overwhelming , show example website)

   Rationale: Personal touch -> increase user engagement (*Aesthetic-Usability Effect*)

FRONT END

- - Get inspo from AnimeList website

- *Rationale:* *Users spend most of their time on other sites. This means that users prefer your site to work the same way as all the other sites they already know. (Jakob's Law)*

- Reliable API (JikanAPI)

- React JS

- MVC Structure (Bruno for Testing)

- Pain Point # 1 - add user feature

- Material UI (React compatibility)

The Anime Basket

> Goal: A website wherein a user can share and discuss anime without "accidentally" spoiling it.

Features

- Fave Anime
- Watching
- Wishlist
- Dropped
- Ongoing etc.
- Finished
- Mark Spoiler in Comments.
